

PASSWORD STRENGTH CHECKER

Intern Details

- Intern ID: CTTS169
- Name: Avinash Kumar Ray
- Domain: Cyber Security
- Project Name: Password Strength Checker

Introduction

Password security is an essential part of cybersecurity. Weak passwords can make user accounts vulnerable to cyber attacks such as brute-force attacks and dictionary attacks. This project helps users evaluate the strength of their passwords and encourages the use of secure passwords.

Objective

The objective of this project is to analyze password strength based on different security parameters and provide feedback to users for creating stronger passwords.

Technologies Used

- HTML
- CSS
- JavaScript
- GitHub

Features

- Password Strength Analysis
- Real-Time Validation
- Password Strength Meter
- Show/Hide Password Option
- User-Friendly Interface
- Security Recommendations

Project Working

1. User enters a password.
2. The system checks:
 - Password Length
 - Uppercase Letters
 - Lowercase Letters
 - Numbers
 - Special Characters
3. A score is generated based on these conditions.
4. Password strength is displayed as:
 - Weak Password
 - Medium Password
 - Strong Password
5. A visual strength meter is updated accordingly.

Advantages

- Improves password security awareness.
- Encourages users to create stronger passwords.
- Easy to use and understand.
- Helps reduce risks associated with weak passwords.

Output Screenshots

Weak Password

Password: 12345

Medium Password

Password: Test123

Strong Password

Password: Test@123Secure

(Insert your screenshots here)

Conclusion

The Password Strength Checker successfully evaluates password strength and provides users with feedback for improving password security. The project demonstrates the importance of strong passwords in cybersecurity and helps users follow secure password practices.

Future Enhancements

- Password Generator
- Password Breach Detection
- Multi-Language Support
- Advanced Security Scoring
- Database Integration
